

### **Curriculum Statement of Intent-**

At Gloucester Academy, our science curriculum will produce students that are scientifically literate. This means that our students will have the ability to understand, experiment and reason as well as interpret scientific facts and their meanings.

Our students will:

- Have the knowledge to make critical judgements in their lives. This means they will be able to evaluate facts to make an informed decision.
- Have the skills to critically analyse information by breaking it down into its constituent parts.
- Have the ambition, curiosity and passion for science, so that they can pursue science beyond Gloucester Academy.
